

SETU

Sanskrit for bridge.

A cognitive accessibility layer for the students
the web was never built for.

Chrome extension · Web workspace · Android app · One shared engine — all live today

overload → one next step

3.6 million students. 54,080 counted.

Specific learning disorders affect 8% of Indian children. Indian higher education formally registers one student in a thousand as disabled. Everyone else copes alone.

INDIAN HIGHER EDUCATION • 45.0 MILLION STUDENTS

3,600,000

Students with dyslexia, dysgraphia or dyscalculia — 8% pooled prevalence

54,080

← that sliver is the entire bar

Students registered with a benchmark disability — 0.1% of enrolment

That gap — roughly 3.5 million students — is the market and the reason.

AISHE 2023–24 • Scaria, Bhaskaran & George, Indian J Psychol Med 2023 — meta-analysis, 8,133 children

AND THE WEB IS MOVING AWAY FROM THEM

95.9%

of the top 1,000,000 home pages fail WCAG — up from 94.8% a year ago.

56.1

accessibility errors per page, up 10.1% in twelve months.

WebAIM Million, 2026

SCREEN READERS

Read the page aloud.

READING TOOLS

Restyle the text.

AI CHATBOTS

Answer questions about it.

SETU

Gets the task finished.

One engine behind four surfaces.

A Chrome extension, a web workspace, an Android app and a shared AI engine — deployed, running, and speaking eleven Indian languages.

≈50,000 lines · 160 source files · 32-point automated smoke test · built and deployed by five final-year students

setu-amber.vercel.app · setu-37hl.onrender.com

01

LOCAL-FIRST

Ten reading tools run entirely inside the browser. No server call, no cost per use, and they keep working with the network off.

02

DEGRADES, NEVER FAILS

Every AI feature draws an answer from the page in under a second, then upgrades it. Free model tier → paid → deterministic offline engine.

03

REWRITTEN ON CLINICAL EVIDENCE

A specialist told us our headline feature does not work. We demoted our own flagship and rebuilt around comprehension.

“Bigger fonts don’t help. The difficulty is comprehension, not eyesight.”

Dr. Prakhar Jain · clinical review · 17 August 2026

So we built Numbers mode for dyscalculia, a picture mode that carries no text, and a crisis path that never reaches a model.

PRODUCT DEMONSTRATION

LIVE.

Not a video. This laptop. Right now.

Three minutes. Five moments.

01

THE PORTAL

A real registration form.
Fourteen fields, three warnings,
no order.

02

ALT + 3

Three steps appear in under a
second. Nothing left the
browser.

03

COMMANDER

It fills the form — then stops
before submitting, and asks.

04

THE VOICE

Hover a branch on the map. It
speaks. In Tamil.

05

THE HANDOFF

The same task, on the phone,
picked up mid-sentence.

Break-even at four campuses.

The architecture is the business model: most of what SETU does costs us nothing to run.

WHAT ONE ACTIVE USER COSTS US PER MONTH

₹25 ≈ \$0.30

- ₹8** AI reasoning — Gemini 2.5 Flash, ~30 operations
- ₹15** Natural voice — Sarvam Bulbul, ~10,000 characters
- ₹2** Storage and cross-device sync — MongoDB
- ₹0** Ten local tools — they never call us at all

Today it is ₹0. The model chain starts on free tiers and ends in a deterministic offline engine. Infrastructure spend to date: ₹0.

HOW WE SELL IT

CAMPUS

₹99 per student, per year

Licensed campus-wide, because 98.5% of the students who need it were never diagnosed.

EMPLOYER

₹499 per employee, per year

European Accessibility Act in force since June 2025. RPwD Act and GIGW here.

INDIVIDUAL

Free forever · ₹199 a month

The free tier costs us nothing to serve. That is the growth loop, not a subsidy.

WHERE IT GOES

500 campuses is 1% of India's 48,246 colleges. Gross margin at that scale: ~64%.

Year-one build and run: ₹18 lakh. Four campus licences cover it.

Dr. Prakhar Jain, the specialist who reviewed SETU, has offered to build a version of it for his hospitals — inbound demand, before we launched.

CONCLUSION

The interface was the disability. Not the person.

WHAT THE PILOT WILL MEASURE

Time to first action

From landing on the page to doing something.

Task completion rate

On dense, multi-step forms.

Independent completion

Finished without asking anyone for help.

THE ASK

One pilot campus

through a Capgemini client, this semester.

One introduction

to a university disability-support office.

Back SETU

in the finale — and we will publish the numbers.
